Summary

Final-year Computer Engineering student with a 9.02/10 CGPA and experience building 10+ production websites. Skilled in TypeScript, Node.js, Express, PostgreSQL, REST APIs, and React/Next.js. Built finance and paper-trading applications emphasizing transactional data integrity, authentication, pagination, caching, and real-time updates. Experienced in production debugging, API integrations, and client communication.

Education

B.E. in Computer Engineering — **Expected July 2027**
Gujarat Technological University — Ahmedabad, Gujarat
CGPA: 9.02/10

Professional Experience

Full Stack Engineer Intern — **Mar 2026 – Sep 2026**
Grow My Therapy

- Integrated REST APIs, authentication-related workflows, contact forms, newsletter flows, and Stripe payment functionality across client-facing websites and dashboards.
- Contributed to 10+ production websites using Next.js, React, TypeScript, and Tailwind CSS, working across 400+ page/route files and 1,500+ reusable UI components.
- Built and maintained responsive dashboard interfaces, reusable components, and dynamic routes; debugged rendering, responsiveness, and production issues using Chrome DevTools, Postman, and Git.
- Communicated with clients and stakeholders to clarify requirements, prioritize requested changes, share progress, and deliver website updates.
- Supported deployment and maintenance of production applications through AWS Amplify.

Technical Skills

Languages: TypeScript, JavaScript, Java, C, SQL
Backend: Node.js, Express.js, NestJS, REST APIs, JWT, API Validation
Databases: PostgreSQL, Redis, MongoDB, Prisma, SQL Transactions, Redis Pub/Sub
Real-Time: WebSockets, Server-Sent Events (SSE)
Frontend: React.js, Next.js, Tailwind CSS, Redux Toolkit, Recharts
Tools: Docker, AWS Amplify, Git, GitHub, Postman
Core CS: Data Structures and Algorithms, OOP, Operating Systems

Projects

FinPulse – Real-Time Paper-Trading Platform — GitHub
React, TypeScript, Node.js, Express, PostgreSQL, Redis, WebSockets, SSE, Docker

- Developed REST APIs for portfolio and holdings management, simulated buy/sell orders, and paginated order history using SQL `LIMIT/OFFSET`.
- Ensured order consistency with PostgreSQL transactions and `FOR UPDATE` row locking; validated available holdings to prevent concurrent sell orders from overselling positions.
- Implemented Redis caching with a 30-second TTL and PostgreSQL fallback for asset data, alongside real-time quote updates through WebSockets and portfolio-scoped Server-Sent Events (SSE).
- Added JWT authentication, bcrypt password hashing, portfolio ownership checks, rate limiting, and backend integration and calculation tests.

Personal Finance Platform — GitHub
Next.js, React, TypeScript, Express, PostgreSQL, Prisma, JWT, Gemini AI

- Built a full-stack finance application for account management, income and expense transactions, categories, budgets, CSV import/export, and financial analytics.
- Maintained financial data integrity through atomic PostgreSQL transactions and exact decimal arithmetic when creating, editing, and deleting transactions that affect account balances.
- Developed authenticated REST APIs with JWT-based HTTP-only cookie sessions, input validation, user-scoped database queries, and server-side pagination, filtering, searching, and sorting.
- Integrated Gemini AI for transaction categorization, spending insights, and conversational finance assistance, with output validation and fallback behavior.

Achievements

Smart India Hackathon – Participant, 2024 & 2025 | **WeMakeDevs First Commit Hackathon** – Participant
Hack The Spring – Participant, GEC Gandhinagar | **NPTEL** – Programming in C
